Our business partner OS Media has office in Romania, we focus on working with people with incredible ideas. We have our clients globally. Our Parent company is Linkscreens (USA), Linkscreens started its business in India by the name of Daboya. Our business partner is OS Media (Romania).

Achievements/Tasks <https://www.daboyatechnologies.us/>

- As the web developer of a web project MyCommunity.today, I successfully completed the development and launch of a new website which have lots of features e-commerce to chat and social things that exceeded client expectations. My contributions included designing and developing a responsive user interface, implementing an efficient back-end system for processing orders and payments, and conducting rigorous testing to ensure a seamless user experience. Over the course of the project, I also collaborated closely with the client to understand their specific needs and preferences, and incorporated their feedback into the development process. As a result of our efforts, the website achieved a significant increase in online and advertising sales, with a 30% rise in revenue within the first month of its launch.

PERSONAL PROJECTS

Netflix Clone

- As a developer on a Netflix clone project, I played a key role in the successful development and launch of a streaming platform that replicated the core features and user experience of the popular entertainment service. I developed a user-friendly front-end interface using modern web development technologies, implementing a back-end server that handled user authentication, video streaming

Dall-e ChatGPT AI Image generation

- As a developer i use ChatGPT openAI API for AI image generation based on keyword that we wrote My contributions included developing a user-friendly front-end interface using Next.js modern web development technologies, implementing a back-end server that handled user authentication, using nodejs and ExpressJS and recommendation algorithms

Food Delivery E-commerce

- As a developer on Food E-commerce project, I played a key role in the successful development that replicated the core features and user experience of the popular Zomato service. I use Next.js for web development, implementing a back-end server that handled user authentication, using nodejs and ExpressJS and conducting comprehensive testing to ensure a high-quality user experience.

ACHIEVEMENTS

Implement throttling logic in many of search where we search products or businesses to it saves lot's of bandwidth and give user smooth experience while searching anything whether product or business which resulted decrease the bounce rate by more that 40%.

Optimized website loading time and pagination using debouncing technique algorithm which make pagination seamlessly smooth user demand this which resulted 30% increase the time spent on the website by user
